PrinterOn Cloud Print Platform March 2014 (6019) Upgrade Notice

Product Changes and Enhancements

The PrinterOn Cloud Print Platform provides a wide range of services to customers and partners. Services include PrinterOn's Cloud Print Servers that offer print services for mobile apps, email and through PrinterOn's customizable Web Print Portal. The PrinterOn Web Services also offer PrinterOn's web-based service administration portals and PrinterOn's APIs.

This upgrade has introduced a number of improvements including:

- **New – QR Code Discovery**
  PrinterOn's next generation of mobile application supports a single unified QR-code based printer discovery and configuration process. By using a combination of the information included on a QR code, the mobile application, and a supported Cloud Print Server, either Public or Private, the PrinterOn Mobile Application can locate and configure access to a printer in a single step.

  This unique approach allows the PrinterOn Mobile App to determine not only the printer but also the Cloud Print Service with which the printer is associated. This eliminates the need for users to pre-configure their print service and provides more mobility to users, regardless of network.

  The PrinterOn Web Administration Console now allows administrators to generate and download QR codes for printers to be printed and placed on printers or emailed to users. QR code information is listed under the Required Settings section of the Printer Administration section.

- **Improved – PrinterOn Directory Search and Mobile Application Discovery**
  Improvements have been made to the PrinterOn Directory Search and Discovery services to support the release of the next generation PrinterOn Mobile applications. Improvements include:
    - Addressed an issue which caused some non-ACL controlled printers not to be shown when user credentials were entered in the PrinterOn Mobile App
    - Addressed an issue when performing a location based search though PrinterOn Enterprise with Public Printer Search Enabled that limited search results to only Enterprise printers.

- **Fixed – Enterprise-Based Public Search Improvements**
  Significant enhancements have been made to improve the performance of the PrinterOn Cloud Print management tools.

- **Fixed – Japanese Email Print**
  Addressed an issue that caused emails configured to respond in Japanese to be displayed in English when viewed using Lotus Notes clients.

- **Improved** **– API Updates to Increase SessionMetaData Length**
  Increased the maximum allowable characters in the SessionMetaData API field for API integrators.

- Numerous other improvements to PrinterOn's Cloud Print platform
