

PrinterOn Cloud Print Platform October 2013 Upgrade Notice

Product Changes and Enhancements

The PrinterOn Cloud Print Platform provides a wide range of services to customers and partners. Services include PrinterOn's Cloud Print Servers that offer print services for mobile apps, email and through PrinterOn's customizable Web Print Portal. The PrinterOn Web Services also offer PrinterOn's web-based service administration portals and PrinterOn's APIs.

This upgrade to PrinterOn's Cloud Print Platform includes numerous output quality and user interface improvements.

This upgrade has introduced a number of improvements including:

- **New – Brazilian Portuguese Language Support**
PrinterOn's Cloud Print platform now supports Brazilian Portuguese in addition to the existing set of supported languages: English, French, German, Dutch, Spanish, Italian and Japanese. Brazilian Portuguese language support includes PrinterOn Web Printing Portal, Email Print and PrinterOn's Mobile Apps.
- **New – Brazilian Portuguese Currency Support**
Added Brazilian Real as a supported currency type.
- **Improved – PDF Print Quality and Compatibility**
Significant improvements have been made to PDF quality and compatibility. This addresses issues reported by some customers that resulted in blank output for some PDFs and addresses issues that resulted in errors when opening some PDFs.
- **Improved – Email Body Print Quality**
Significantly improved WYSIWYG support for printing images embedded in HTML-based email. The enhancements address issues reported with font substitutions and font size differences between the original HTML email message and the printed output.
- **Improved – “Far East” language support for email printing**
Significant improvements made to printing that contain “Far East” encodings in the email body or attachment names. This update addresses both the quality of the printed output for email bodies and addresses an issue that could cause some attachments to not be printed and report an error.
- **Improved – Localization Support**
Many improvements have been made to address minor issues displaying international characters in the PrinterOn Web Print user interface.

- **Fixed – PrinterOn ACL & Administrator Access**

Addressed an issue that did not allow more than one site administrator access a site's ACL printers without manually being added to a control list.

- Numerous other improvements to PrinterOn's Cloud Print platform
