

## PrinterOn Cloud Print Platform November 2014 Upgrade Notice

---

### Product Changes and Enhancements

The PrinterOn Cloud Print Platform provides a wide range of services to customers and partners. Services include PrinterOn's Cloud Print Servers that offer print services for mobile apps, email and through PrinterOn's customizable Web Print Portal. The PrinterOn Web Services also offer PrinterOn's web-based service administration portals and PrinterOn's APIs.

### PrinterOn Additions and Improvements

- **New – PrinterOn Enterprise Local Driver Management and Support**  
PrinterOn Enterprise administrators may now manually configure the Enterprise server to use locally installed drivers in addition to the PrinterOn managed drivers. This new feature will allow administrators to configure individual print queues to use any print driver, independent of whether PrinterOn directly supports the driver.
- **Improved – Custom Remote Release URLs**  
The PrinterOn Mobile Remote Release capability has been enhanced to use custom PDH URLs configured on the PrinterOn Administration Dashboard.  
NOTE: Users who have saved printers in their PrinterOn Mobile Apps should update the printer settings to take advantage of the functionality.
- **Improved – PrinterOn Device Status Monitor**  
A number of improvements have been made to the PrinterOn Device Status Monitor service and management tools including:
  - Device monitoring configurations from enabled printers can now be copied to other printers to streamline the configuration of large deployments
  - Removed Status Monitor link that was accidentally displayed for sites that are not enabled
  - Updated notification emails to include both printer names and IDs
  - Modified the default values for notification intervals
  - A number of minor cosmetic changes to the administration user interface.
- **Improved – PrinterOn Access Control Lists**  
A number of improvements have been made to the PrinterOn Access Control Lists management tools including:
  - Improved notification email to new ACL members to activate their accounts
  - Fixed an issue that caused 2 emails to be sent to some new ACL members
  - Addressed an issue that caused printers with long names to be truncated in the user interface
