

## PrinterOn Hosted July2016-2 Release Notes

---

PTS5048-WEB6042

### Product Changes and Enhancements

The PrinterOn Hosted Cloud Print Services provide a wide range of services to customers and partners. Services include PrinterOn Hosted Cloud Print that offers print services for mobile apps, email and through PrinterOn's customizable Web Print Portal. The PrinterOn Web Services also offer PrinterOn's web-based service administration portals and PrinterOn's APIs.

### Product Changes and Service Enhancements

- **New – Ricoh HotSpot 3.10 Auto-Configuration for Legacy Clients**  
To support legacy Ricoh HotSpot printers using PrinterOn provided a dedicated service endpoint that supports a deprecated SSL version. This was done in conjunction with releasing a HotSpot version with a corresponding client certificate to maintain security.  
The printer registration process has been updated to automatically configure the Print Delivery Hub service URL based on the printers type and software version.
- **Improved – Enforce User Input Length Validation for Samsung Secure PIN Support (WEB-6652)**  
Update user input field validation to ensure input is between four(4) and twenty(20) characters long.
- **Fixed – Unable to Perform Remote Release from PrinterOn Mobile and Secure Release Anywhere (WEB-6665)**  
Addressed an issue that caused Remote Release from the PrinterOn Mobile Apps to fail when attempting to release a job using the PrinterOn App at some Secure Release Anywhere release stations.
- **Fixed – Print Jobs Not Held by PrintConnect When Using Xerox Standard Accounting Integration and Secure Release Codes (WEB-6664)**  
Addressed an issue that caused jobs to be automatically released when enabling Xerox Standard Account and using a PrinterOn PrintConnect and PrinterOn Release Codes are enabled. The issue was caused by configuration settings being incorrectly set to Automatic Release when enabling Xerox Standard Accounting and Release Code set to required.
