

PrinterOn Mobile for iOS 3.5.8 - Release Notes

Version 3.5.8

PrinterOn Mobile for iOS offers an integrated solution for accessing both the PrinterOn Server Platform as well as PrinterOn's global network of Public Print locations in a single unified application. PrinterOn Mobile for iOS simplifies the process of discovering and printing to all PrinterOn's services.

PrinterOn Mobile for iOS supports iOS 9.0 or newer.

Product Changes and Enhancements:

- **New – Multiple PrinterOn Services in an MDM configuration** (iOS-598)
To support complex network deployments, administrators have the option of configuring multiple PrinterOn services at once within the same MDM.
- **Improved – Print History Storage Management** (iOS-634)
iOS users now have the option to manage the Print History Storage size and specify a minimize size of 0MB.
- **Fixed – Google Email Setup Failure on iOS 11** (iOS-634)
Addressed an issue setting up email accounts within the iOS application due to an issue completing the authentication process with Google.
- **Fixed – Print Jobs missing from Print History When Launched via A QR Code** (iOS-727)
Addressed an issue that caused print jobs to not be shown in the Application's Print History when the user launched the application by scanning the QR code of a child printer.

System Requirements

- iOS 9.0 or newer
- MDM/MAM integrated applications require a configured MDM/MAM server and provisioned device to work correctly.

Please contact support@printeron.com if you have any questions.
