Benefits to IT Departments

> Enterprise-grade security for protection of patient information

> Eliminates driver management - drivers are managed in the cloud

> Integrates with your existing secure infrastructure

> Authentication - works with your AD or LDAP user groups

> Print management - integrates with your current PMS for job tracking and auditing

Benefits to Healthcare Professionals

> Secure release of documents provides confidentiality

> Printing easy-to-read documents for patients reduces errors

> On demand printing from mobile devices as well as laptops/PCs

> Print from EMR applications

> Variety of printing methods to suit different work styles - email, apps, web upload, driver

PrinterOn for Healthcare

Secure, enterprise-grade mobile printing solution for Healthcare

Healthcare is one of the most security-sensitive industries. Doctors, nurses and staff must comply with strict policies around patient privacy and security of information. It is no surprise then that printing this type of information has its challenges. Add in other requirements such as the need to print from all types of mobile devices on different networks and from multiple locations and you have a significant challenge.

The PrinterOn Enterprise Platform

With the PrinterOn Enterprise Platform, medical facilities can add mobile print capability to the current secure infrastructure while making sure all existing solutions and services are accounted for throughout the mobile print workflow. All processing and printing of documents is done on-premise within the secure network, keeping patient information private.
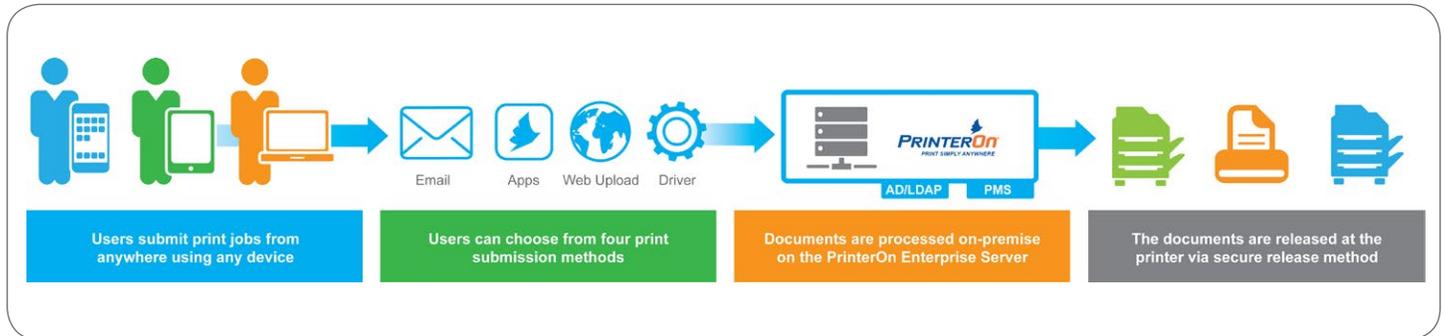

PrinterOn Enterprise is designed to integrate with Active Directory and other LDAP-based services, ensuring each user is authenticated before submitting documents for printing.

PrinterOn works with print management solutions such as Equitrac and Ricoh Streamline NX for tracking and auditing of all print jobs, providing extra levels of security.

To further protect patient privacy, PrinterOn also adds secure release functionality via release codes or through integration with other PIN or pull printing solutions. This prevents documents from accidentally getting into the wrong hands.

PRINTERON
PRINT SIMPLY ANYWHERE

AD/LDAP   PMS

| Users submit print jobs from anywhere using any device | Users can choose from four print submission methods | Documents are processed on-premise on the PrinterOn Enterprise Server | The documents are released at the printer via secure release method |

Mobile Apps for Easy Searching and Printing

The PrinterOn mobile printing apps enable enterprise users to search for and print to all enabled corporate printers as well as all PrinterOn public printing locations while on-the-go. The apps in conjunction with the PrinterOn platform make finding a printer easy through various discovery methods, so no matter where a user is, they can find the printer nearest to them at any time.

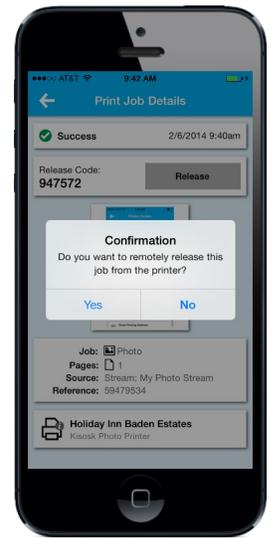

Enterprise Search
Presents all authorized printers for a specific user within an organization

QR Codes
Scan QR code on printer to get printer details and save to your favorites

Print Preview
View documents before printing, choose number of copies and pages

Remote Release
Releasing documents directly from the app provides a fluid workflow
