

K-12 Printing Solutions

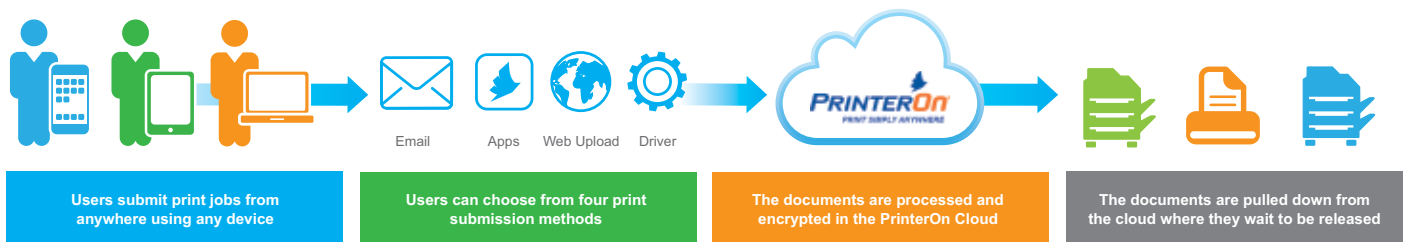

Simple, secure cloud printing for
any device on any platform

Give students the freedom to print from mobile devices, keep costs under control

Mobile devices provide new and exciting ways for teachers to present concepts and students to learn. While they are great teaching tools, these devices also present some challenges along the way such as printing. How do you print from them? And when they are given print capability, what about paper and toner waste by students who print large documents or just never pick up their documents once printed? With budgets so constrained, K-12 schools not only need to provide a way to print from mobile devices in a simple manner but they also need control over the costs associated with it.

PrinterOn® Hosted for K-12 is specifically designed for schools that want to provide simple, secure mobile printing to students and staff. The flexibility, quick deployment and budget-friendly price point of the PrinterOn solution is what makes it such a desirable choice for K-12 schools. Choose a hardware deployment, software deployment or embedded solution. Either way, you will be providing students and staff with the most widely used mobile printing solution in the world.

The PrinterOn Hosted Workflow

Deployment Options

Hardware

The PrinterOn PrintConnect™ device connects to the local network or printer via USB. The PrintValet™ keypad connects to the PrintConnect providing secure release.

Software

PrintDelivery Station (PDS) installed on a Windows PC turns any printer connected to it into a cloud printer.

Embedded

Ricoh HotSpot Printers and MFPs are embedded with the PrinterOn software for an all-in-one solution at any location.

Print Methods

Mobile Apps

Mobile printing apps for iOS and Android provide simple search and print workflows.

Email

Simply send an email with attachment to the printer's email address.

Web Portal

Documents can be uploaded via a web portal URL. Portals can be customized with school colors and logo.

PrintWhere® Driver

Universal driver provides File>Print workflow for Windows PCs and tablets.

Release Options

Keypad

The PrintValet keypad provides secure release capability for any printer.

Remote Release

Through the mobile apps, students can submit and release documents from their mobile devices.

PC Release

Documents can be released through a simple release client installed on any Windows PC.

Printer Interface

Ricoh HotSpot MFPs provide document release through the user interface.

Simple Solution, Robust Features

■ BYOD Support

Students can print from any smartphone, tablet or laptop on any platform

■ Mobile Apps

The PrinterOn mobile apps for iOS and Android provide printer discovery and a convenient way to print photos, web pages and files.

■ Secure Release

Secure release provides confidentiality especially for staff who deal with personal information.

■ Access Control Lists

Limit who has access to certain printers and features, keeping costs down

■ Language Support

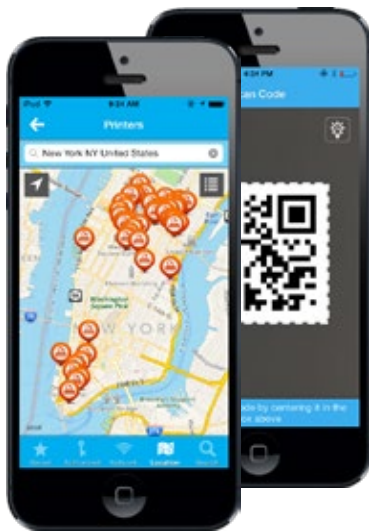

The mobile apps and web portals are available in 12 languages making it easy for international users to print.

■ Supported Document Types

With PrinterOn, students and staff can print almost any file type, including PDF, Word, Excel, PPT, Visio, Open Office, TIFF, JPG, PNG, BMP and GIF.

Printer Discovery

The apps in conjunction with the PrinterOn hosted platform make finding a printer easy through various discovery methods, so no matter where a student is, they can find the printer nearest to them at any time.

■ Keyword Search

Keywords like city, state or location name will return all PrinterOn services in those areas.

■ GPS Search

Uses the GPS functionality of a device to locate printers nearby.

■ Network

Printers on the current network of the mobile device are displayed automatically.

■ QR Codes

QR codes placed on printers can be scanned via the mobile apps to obtain printer details and save to favorites.

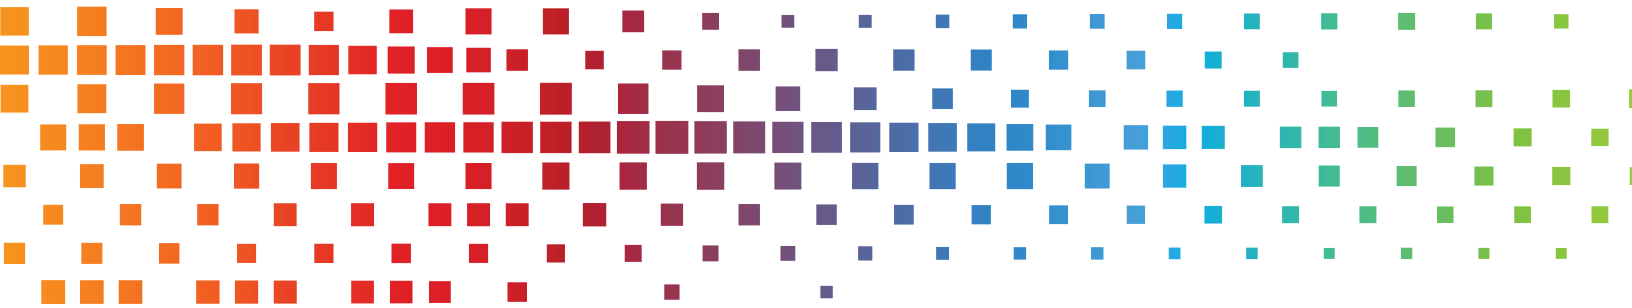

Key Benefits

- Students can print from any mobile device, laptop or PC for BYOD environments
- Secure release keeps documents private and prevents paper waste. Documents never released do not get printed
- Reduce paper and toner waste by setting page limits to prevent large documents from being printed
- Eliminate or scale back PC labs used just for printing
- Simple deployment turns any printer into a cloud printer
- Well priced solution that fits within your tight budget
- Students and staff can print from home or wherever they are to the school's printers
- Mobile apps for iOS and Android provide simple search and print workflows
- Variety of printing methods to suit different work styles - email, apps, web upload, driver

Need an on-premise printing solution for your school?

PrinterOn Enterprise provides secure mobile printing for students and faculty. Documents are rendered and encrypted in your private cloud so no information ever leaves your secure network.

www.printeron.com/enterprise

PrinterOn is the world's leading enterprise-grade Mobile Printing Platform. PrinterOn has been delivering mobile printing solutions for 14 years to three major verticals: enterprise, education and public printing locations.

PrinterOn was the first to develop a private and public cloud printing solution and today operates the largest public printing NOC (Network Operations Center) in the world. PrinterOn uses cloud technology to enable users to print documents from any smartphone, tablet, or laptop to any PrinterOn-enabled printer in the world regardless of network or location.

PrinterOn has been deployed in corporations, hotels, universities, airports and libraries in over 120 countries. There are over 10,000 PrinterOn printing locations worldwide and since its inception in 2000, users of PrinterOn have printed over 80 million pages.

PrinterOn technology is protected in the U.S. and internationally by issued and pending patents including US Patents 7,007,093, 7,249,188, 6,990,527 and 7,827,293.
